at FROST SCIENCE

2025 Symposium Sponsorship Deck

November 18 - 21, 2025

Phillip and Patricia Frost
Museum of Science
Miami, Florida

ReeFLorida@frostscience.org

Mission

To bring together conservation practitioners, researchers and educators who have an impact on the health of Florida's Coral Reef. The symposium will focus on research, tools and techniques for restoring and preserving Florida's Coral Reef and highlight coral conservation initiatives, formal and informal education, and public outreach.

Overview

Florida's Coral Reef benefits and supports the 6 million residents of South Florida and 38 million visitors yearly to this region. Unfortunately, the reef is threated by a variety of local and global factors. ReeFLorida is Frost Science's multifaceted response to these threats.

Frost Science will host the third annual ReeFLorida symposium, highlighting new research, innovative conservation and educational efforts specific to Florida's Coral Reef. The week-long event, taking place November 18 – 21, will feature three main themes: scientific research, restoration and environmental education on Florida's Coral Reef.

Our 180+ symposium presenters and attendees will include researchers, educators, managers, and conservation practitioners who work at a variety of stakeholder groups, including non-profits, universities and governmental organizations.
