

Abstract number	PCSI 2025 - Abstract
3	Strengthening Dermatological and Infectious Disease Surveillance and Care Delivery in Resource-Limited Settings: Lessons from Nepal
4	Optimizing Patient Care and Resource Allocation Through Electronic Medical Records and Health Insurance Integration in Nepal
5	Capturing the variation in resident care costs in the Australian aged care system
6	A proposed typology of policy-driven payment rates for hospital care
8	Addressing global health inequities: Improving data for social determinants of health
10	Service-Related Groups in Federal hospital planning – Opportunities and challenges
12	Utilizing artificial intelligence (AI) to monitor the quality of infection therapy: Integrating casemix and clinical data to enhance care quality
14	What we know about the cost of a standard day in long term care in Canada
15	Development of a standardized tool for visualizing information on new cancer cases for health and social services institutions in Québec (Développement d'un outil standardisé de visualisation de l'information sur
17	Lowering the medical data production load in hospitals by challenging the institutional demand
18	Severity determination in French DRGs: Towards the experimentation of a new model
19	Computer-assisted coding and documentation in a large hospital in Milan, Italy
20	Improvement of Surgical Hierarchy Criteria in KDRG V4.6
21	Improving the Accuracy of the Patient Classification System through Refinement of Classification Variables
22	Application of case-mix methodology for population-based physician workforce planning in Ontario, Canada
23	Transforming patient care: Automated mapping of hospital patient episodes using process mining with sequential probability analysis
24	Impact of precise staging of acute kidney injury and chronic kidney disease on treatment outcomes: Observational study, real world data, ICD-10-GM
25	Effects of the introduction of HybridDRGs in Germany analysing real-world data
26	Global shift of health care systems towards the ambulatory care
27	A review of data capture, costing and pricing for virtual care in Australian public hospitals: Insights and challenges
28	Balancing funding stability and incentivising activity reporting in the transition of Australian community mental health services from block funding to activity based funding
29	Designing block funding arrangements within an activity-based system for community mental health: Lessons from Australia to reduce financial risk for rural and specialised services
30	Implementing a new regionally managed funding mechanism: The population endowment
31	Implementing a new methodology to forecast the hospital activity in France until 2027

32	Costing app – create your own tool or buy an established IT solution?
33	Population health segmentation and stratification: Applications of patient need groups (PNGs)
34	Stakeholder responses to the results of the national cost analysis
35	Preparing coders and leadership for AI-driven medical coding
36	Patient grouping as a driver of value in health: Case study – Severe maternal morbidity (SMM)
37	Supporting patient care across provincial/territorial boundaries in Canada with patient cost data
38	Case study: A hospital in Melbourne, Australia – Benefits of moving from retrospective to concurrent query/coding process
39	Funding policy considerations reflecting on projected patterns of illness in Ontario
41	Harnessing Casemix Data and Coding Systems: A Tool for Population Health Measurement
42	Optimizing Healthcare Efficiency through Casemix Driven Machine Learning: A Predictive Model for High-risk Readmissions
43	The use of EffectiveCAN with confidence levels for automated ICD-10-CM/PCS coding of French hospital stay records
44	Australian clinical coding artificial intelligence (AI) adoption guideline
46	Australia's national hospital cost data collection (NHCDC)
47	Developing an autonomous coding solution: Canada, UK and Australia – results across three ICD versions
48	Advancements in international benchmarking, predictive forecasts and data quality
49	A partnership approach for developing national safety, quality, and population health insights from coded data
50	Advancements in coding, classification systems, and data quality in Canada
51	A national-level patient-level costing model: Overcoming provider deficiencies and driving healthcare transformation
52	KSA value-based payment models journey: Design to implementation
53	The need for a national training program in patient-level costing
54	Developing and improving predictive models of the risk of health utilisation and future healthcare expenditures: National recalibrations and new markers
56	Increasing social determinants of health (SDoH) data code capture across healthcare systems
57	Mapping the future of patient level costing in Canada
58	Patient grouping: Converting data into actionable insight using pure clinical categorical methodologies
59	The need for change: Too many health systems are data rich, information poor (DRIP)

60	Patient Classification Models, Powerful Tools in a Healthcare Emergency. A Data Driven Prioritisation Model for the Distribution of PPE.
61	Financial evaluation of groupings for DRG 301 Hip joint replacement (Évaluation financière des regroupements pour le DRG 301 Remplacement articulaire de hanche)
62	Comparison of Johns Hopkins ACGs and the CIHI population grouper for assessing the morbidity and health care utilization of the population of Ontario, Canada
63	Development of a coding audit methodology framework for the private health sector in the Kingdom of Saudi Arabia
64	Clinical documentation improvement framework for the private sector in the kingdom of Saudi Arabia
65	Accuracy of DRG relative weights calibration using machine learning versus standard HSRV methodology
66	Towards curated learning: Analyzing casemix NordDRG system expert system using machine learning tools
67	Integrating activity and auditing metrics to advance hospital performance in Herzegovina-Neretva Canton
69	Impact of the pop-grouper reference period on the results of clinical profile segmentation using Québec's clinical-administrative data (Impact de la période de référence de pop-grouper sur les résultats de la
71	Integrated and personalized care for multimorbid patients: Optimizing treatment and funding
72	Application of the Canadian grouping methodology to assess primary care service use by the population: A planning support tool (Application de la méthodologie de regroupement Canadienne pour évaluer
74	The LABTNS-CPSS toolkit: An R for updating comorbidity scores refined by chronic conditions
75	Estimating costs to patient groups in the absence of patient costing
76	High rates of central line and port infections following ambulatory cvc procedures detected by AM-PPC
77	The challenge of multimorbidity – Towards integrated and data driven care models: Insights from international collaboration
78	Analysis of the impact of lesion localization practices on the breast cancer care pathway (Analyse de l'impact des pratiques de localisation des lésions sur le parcours de soins en cancer du sein)
79	The cost of superinfections following knee arthroplasty: Demonstrating the financial and clinical impact for stakeholders at the CHU de Québec
80	Strategy for highlighting unit costs to clinicians (Stratégie de mise en valeur du coût de revient auprès des cliniciens)
81	Further advances in the recording system for additional public patient treatments
82	Achieving value and sustainability in aged care pricing and funding
83	Comparative Study on the Allocative Efficiency among 5 countries
84	Case mix measures and resource estimates associated with ALC days in Canada
85	Exploring multimorbidity trajectories in the Canadian population
86	The use of investigative technology in the emergency department and its impact on resource use
87	Outpatient – Creating a Strategic Toolkit to Improve Productivity

88	Validation of the translation and mapping of standard procedure classifications from different health systems using the OHDSI Usagi tool
89	Development an internationally aligned casemix system based on WHO Family of International Classifications
90	A Novel Approach to Hospital Performance Measurement in Ontario that accounts for Patient Mix and Flags Risk of Service Loss
91	Recent staffing and quality indicator trends in Canadian long-term care
92	Using case mix aggregation to understand travel burden for hospital care in Canada
93	Looking to the future: Projecting future hospital activity – Approaches, challenges and results
94	Province-wide implementation of patient-level costing: Saskatchewan improving value in healthcare project
95	Stumbling upon the black gorilla: A lucky break in overcoming healthcare financing barriers with AI
96	Adopting activity based management utilising monthly activity based costing and an activity based budget
97	Casemix costing in Ireland – Uses beyond ABF
98	Improving and utilising coded sepsis data: Clinical audit and coding quality
99	Developing coding guidance for elective care surgical hubs in Ireland
100	From patient-level costing to value-based healthcare: International learnings and Montreal Jewish General Hospital experience
101	Value-based care – The data to advance the vision
102	Improving outcomes and quality of care in Oncology through Patient-Based Funding in Quebec
103	Optimizing cost and quality through enhanced clinical grouping, a multi-expert collaborative approach
